parascene

A community for creating and sharing with generative tools.

WHAT TO SAY

The name is parascene.

One word, always lowercase. In a sentence and in the logo. Not ParaScene, not Para Scene, not PARASCENE.

Use this line

parascene is a community for creating and sharing with generative tools.

If you need a little more

parascene is a peer-to-peer network for people who care about machine learning, generative art, and algorithms, the old ways and the new ones. Creativity, community, and technology live in one place, so people can create, share, and discover without gatekeepers.

Creativity
Tools that support your ideas, not replace them.

Community
A shared space for making, feedback, and collaboration.

Technology
AI, machine learning, and algorithms that make creation accessible.

How we talk about AI

- Models are tools. They do not decide what is art, and neither do we.
- parascene is not an AI-first platform. Work here can use models a lot, a little, or not at all.
- People can run models on their own machines. We are not a single-vendor shop.

Leave this out

- Do not call parascene an AI art site, an AI-only app, or a judge of what counts as real art.
- Do not say the product replaces artists, or that the work on it is only generated.
- Do not use member creations from the site. The only pictures cleared in this pack are on page 05.

LOGO

parascene

On night, #0f0d1a. Wordmark in mist, #ede9fe. The middle of the word sits at 70% opacity. Keep that.

ON PAPER

parascene

Ink, #0f172a, on paper or white. Same file, same opacity. Do not redraw it in a font, and do not set “parascene” in italic Geist and call it the logo.

APP MARK

Violet tile, white italic p. For favicons, avatars, and square crops. Smallest useful size is 24px. Do not set the wordmark inside the tile, and do not change the gradient.

Clear space

Leave half the wordmark’s height empty on every side. Do not lock it against another logo.

Smallest

Wordmark no smaller than 1.25 inches wide in print, or 120px on screen.

Colour

Ink on light grounds, mist on night. Violet and signal green are for interface, not for recoloring the letters.

COLOUR AND TYPE

Night by default.
Violet by day, green by night.

The public page is night, with signal green for the action. Inside the app, paper uses violet for the accent and night uses signal green. Keep that pairing. Green buttons belong on night. Violet buttons belong on paper.

Night	Paper	Ink	Mist
#0F0D1A	#F6F7FB	#0F172A	#EDE9FE

Violet	Signal	Muted	Muted night
#7C3AED	#05C76F	#525A6B	#B3B7C3

Violet is the daytime accent. Signal is the nighttime accent, including the public Enter button. Muted is secondary text on paper. Muted night is secondary text on night.

Geist

The product face for everything that is not the logo. Weights in use are 400, 500, 600, and 700. Fallback: Segoe UI, Roboto, Helvetica, Arial, sans-serif.

parascene keeps the making with the maker. 400

Create, share, and discover. 500

Tools that support your ideas. 600

One word. Lowercase. 700

Geist is an open font, at fonts.google.com/specimen/Geist. The wordmark is custom lettering. Do not approximate it with italic Geist.

PICTURES YOU CAN USE

Homepage stills, and the film they come from.

These five frames are on the public homepage. You may use them, and the film, to show parascene. Credit parascene. Do not place another logo on the picture, and do not present the pictures as your own work.
